

Instruction Sheet No. 5

Terms and Conditions of Delivery

Pumpable Sludges

In advance of any delivery a detailed waste description in English or German language has to be provided (safety data sheet, analysis). Alternatively a sample of the waste may be submitted. Information about modifications of the waste composition must be submitted immediately without request.

Delivery system

- Standard or vacuum tankers
- ASF containers
- Plastic IBC's (not more than 250 kg of solids inside)
- If flammable liquids are delivered, **packaging material** must consist of electrical conductive material, they must be permitted according to ATEX
- If drums on pallets are wrapped in, **electrical conductive stretch films** must be used (ESD: Electrostatic Discharge)

Delivery Conditions

- The waste must be fully pumpable and drain from the container without assistance, sediment content < 30%
- pH > 4
- The waste must not solid agglomerates or foreign bodies such as rags, wood, foil or similar bulk contamination
- Waste must not tend to flocculate, polymerise or to become viscous when temperature drops
- With ASF containers/plastic IBC's leave approx. 10% of container volume for expansion
- **Exclusion List**: Materials which REMONDIS SAVA ist not allowed to accept or which must be excluded from the bunker waste. They are documented in the **Appendix to the Delivery Conditions of Instruction Sheet 1, 2, 3 and 5: Materials, which are excluded from Bunker, Shredder or Paste (Exclusion List)**.

Prior agreement must be obtained for deviation from the conditions mentioned above.

Waste declaration

Waste producers have to analyse and declare the following parameters

- Consistency (solid, liquid, pasty)
- Calorific value
- Ash residue
- Mercury
- Halogenes (single values of fluorine, chlorine, bromine and iodine)
- Total sulphur
- Content of alkali metals (single values of sodium and potassium)
- Content of organic silicon
